

LED Wilderness Kit

Lightweight, Long life, High output.

Gift box includes PK-01-CR123 Flashlight, Body Extender, Headlamp with AA battery pack, Lantern Head and Tripod.

Lantern Head attaches to tripod for stand alone operation. Ideal for a reading light.

Basic body takes one Lithium CR123 battery. Body extender can be attached for use with two AA batteries.

Lamp housing can be transferred from the basic body to the head strap. A battery pack with two AA batteries is incorporated into the strap. Lamp head is adjustable for comfortable hands free work

Lantern Head screws onto basic body to provide soft 360° illumination.

- Head strap with separate battery pack and adjustable beam angle.

DESCRIPTION

The LED **Wilderness Kit** can be easily adapted for any number of night time campsite needs. The system is based on the PK-01-CR123 body and includes a body extender for use with two AA batteries, a head lamp with separate AA battery pack for hands free use, and a lantern head with expandable tripod. All components feature Type III military grade hard anodized aluminum bodies designed to resist scratching or damage from impact. The one watt Luxeon LED emitter is manufactured by industry leading Luma LEDs and produces a flawless white beam, good for 100,000 hours of reliable service. Flashlight body casings and attachments are precision machined from high-strength aircraft aluminium for light weight and durability. All flashlights feature a rear mounted easy on/off switch and are water resistant and rust proof. The Wilderness Kit comes in an attractive gift box for handy storage of components.
