# DIAMOND WOOD WENCH®

Model No. 873

- **Diamond Wood won't swell due to temperature changes or moisture**
- **Tuning Hole Varies Pitch**

The Diamond Wood Wench® is made from select-grade hardwood for producing raspy, yet mellow tones. All Wench® feature "Tone Ridges™" and "Tuning Ditches™" on the sound board that give the calls their raspy highs and lows and keep the calls from sticking. It features a tuning hole in the stopper, which allows you to vary pitch: if covered the pitch is lower, uncovered the pitch is higher. It is designed for the waterfowler who prefers the beauty and mellow tones that only wood can give.

## INSTRUCTIONS

**HOLDING THE CALL-** Use your thumb and index finger to hold the call where the barrel and the bell join. Fold your fourth and fifth fingers flat against the palm of your hand. Open and close your index and middle fingers over the end of the call to help define each note. Imagine that the call is the duck's voice and your hand is the duck's mouth.

**TUNING HOLE-** The tuning hole is located on the bell or stopper. Covered, the call is lower in pitch, uncovered it is higher. Perfect for timber or open-water calling and sounding like two ducks.

**CONTROL AIR PRESSURE-** Place the call to the outside of your lips. Keep lips and cheeks tight. Take a deep breath and hold it in your lungs with your mouth open. Your throat keeps the air from escaping. Now, put air into the call just like when you whisper loudly forming the sound, "UT."

## EXERCISES

**Quack-** The building block for all mallard hen calls is the quack. Use the quack when ducks are approaching your position. It conveys recognition and contentment. Make single notes saying "Ut.", with varying length and pitch.

**Feed Call-** Ducks make this call when they are sitting on the water feeding. It shows contentment. When the ducks are close, make a series of very short, irregular calls, saying, "dut, dut, dut-a, dut dut-a, dut, dut."

**Contented Hen-** A mallard hen's call while resting on water. Use this when ducks are close and circling your decoys. Make four to six calls saying, "Uuuut, uuuut, uuut, uut, uut, ut." The first three notes should be longer than the last two or three. Taper the volume of each note.

**Excited Call-** Use this call when ducks show interest in your spread. Make six to eight excited, fast, demanding quacks with the same cadence and pitch throughout the sequence. "Uuut, uut, uut, uut, ut, ut, ut."

**Come back-** A very demanding call made when other ducks have flown by. In a pleading manner, make four to five notes with each note being shorter and softer than the one before. Say, "Uuuuuut, uuuuuut, uuuut, uuut, uut." The pitch is high to medium and the rhythm is slow and deliberate.
